Comprehensive foot care

At MGH Ankle & Foot we know the importance of healthy feet in supporting a healthy lifestyle. Our board-certified physicians look at the whole patient when diagnosing foot issues.

Foot care for all ages

It is normal for people to experience some foot problems as they age. Foot problems can be the first sign of more serious medical conditions. Health conditions such as arthritis, diabetes, nerve issues, and circulatory disorders may first manifest in the feet. That's why it is important to pay attention to your feet and seek medical attention as soon as you notice a problem.

Expertise in diabetes

Dr. John V. Rice and Dr. James A. Wright take interest in patients of all ages, and believe that early treatment will help prevent further complications, especially with diabetic patients.

They belong to MGH& FC's "Living Well with Diabetes" team of experts, and serve on the faculty as Diabetes Educators.

Walking in comfort counts

We can help our patients to walk correctly and more comfortably by prescribing and fitting orthotic inserts whenever possible.

Quality care for common conditions

Both Drs. Rice and Wright provide diagnoses and treatment for common foot, ankle, and heel conditions such as:

- bunions
- bone disorders
- corns
- calluses
- cysts
- deformities
- heel pain
- infections
- ingrown toenails
- skin and nail diseases
- tumors
- plantar fasciitis

When surgery is the answer

You can take comfort in the surgical ability of Dr. Rice and Dr. Wright, both highly skilled, board-certified podiatric surgeons. They can perform the surgeries which correct or remedy such problems as:

- claw toes
- fractures
- hammer toes
- infection
- ruptured Achilles'
- other ligament and tendon issues

What is a Podiatrist?

According to the American Podiatric Medical Association, a podiatrist, also called a doctor of podiatric medicine, is a specialist who provides medical diagnoses and treatment of foot and ankle problems such as bunions, heel pain, spurs, hammer toes, neuromas, ingrown toenails, warts, corns, and calluses. A podiatrist also renders care of sprains, fractures, infections, and injuries of the foot, ankle, and heel.

In addition to undergraduate medical school training, podiatrists also attend graduate school for a doctorate degree in podiatry. Podiatrists are required to take state and national exams, and must be licensed by the state in which they practice.

Podiatrists are in demand more than ever today because of a large aging population. In addition, according to the Association, foot disorders are among the most widespread and neglected health problems affecting people in this country.

Our Mission Statement

We take every possible action to protect and promote the health of the people in Mason County while extending respect and compassion as we serve each individual.
